INFORMATION BOOK

HOODACRES
Originating Gardens

Summer 1936 :: Spring 1937

CORRECTION: To apply variety names treat both
pages as one and read across.

Corrected
copies at end and read across.

HOODACRES ORIGINATING GARDENS

First home of the world's only double pure WHITE DELPHINIUMS and where other new plants burst forth from the unseen into earth life. Some of these are announced in this catalog and other introductions will follow.

I wish to thank those who have reported results on the plants or seed from Hoodacres, and add that any help I am able to give on your plant problems will be cheerfully rendered.

Unusual interest centers about HOODACRES WHITE varieties and the rare new shades made possible only through them, such as the OPALSPIRE Class. The fragrant ones, also. They are coming into prominence both here and abroad and I shall appreciate any items from those growing them, as well as any interesting clippings relating to Delphiniums.

HOODACRES is located directly on the famous Columbia River Highway, easy to reach from Portland. Take Sandy Boulevard to Birdsdales Avenue and the large "Hoodacres Delphiniums" sign on the corner. (Midway between Portland city limits and Troutdale.) The largest displays of Delphiniums in bloom are through June, September and October. Visitors always welcome.

Flower catalogs in general assume the "poetic license" to embellish with exaggerations. We strive to make Hoodacres products better than the descriptions. Let us know if you think we have not succeeded.

CHAS. F. BARBER

(Mail and wire address) Troutdale, Oregon.

Phone, Gresham (LD) 5071.

Kindly Pass It On if You Have No Use for This Catalog.

BULGING FILES

Our files are packed through with letters telling of unbounded success growing Hoodacres Delphiniums. They report on both Plants and Seeds, as to extraordinary stature, vigorous growth, size and coloring of blossoms. We have only room for the few scattered through this booklet. And then, just to keep our feet on the ground, come occasional complaints from those who have ignored our carefully worked-out instructions for handling them. You can't hoodwink a Delphinium.

HOODACRES DELPHINIUMS

—have been developing over a period of more than 25 years. Remarkable for great range of rarest coloring, variety of floret forms and towering spikes of luxuriant bloom, these features rest on the great constitutional vigor of the strain. We are constantly complimented on the root system carried by our plants. And they are grown without irrigation. Also, they bloom twice in the season.

You can now buy genuine Hoodacres Delphinium plants, grown in our own fields and delivered, transportation free, in as perfect condition as from 50 miles distant, and at no greater cost than seedlings of indifferent parentage.

HOODACRES SPECIALTIES

A perfect Delphinium garden will contain other things as foils. One of these is the improved Japanese Iris, another is the Hybrid Heuchera, and with both of these we have done extensive hybridizing and development. Also to this list should be added our new, large flowered and highly colored Aubrietias and long spurred Aquilegias. Our Oriental Poppies and Hemerocallis (Daylilies) are the finest new kinds.

HARVEST OF THRILLS FROM OUNCE OF SEEDS

Philadelphia, Pa.: "Two years ago we got from you an ounce of Delphinium Seeds and should like this order duplicated now. Results in germination were very satisfactory and last summer clumps were marvelous. Several of the double Whites with chocolate eyes or bee were rarely beautiful and the blues were well assorted for color range. It seems hard to imagine anyone finding a greater thrill in any group of flowers."

WHAT HOODACRES SENDS OUT

"Have in my garden one absolutely true lavender self, three-inch florets, beautifully proportioned plant, and judged by large Eastern growers as the finest and rarest of them all yet seen."—Rochester, N. Y.

CONTINUOUS STREAM OF VISITORS

Belleville, Ontario. "Last year I bought a packet of your Complete Range seeds and one of Wrexham. At the present moment the plants are in full bloom and present a sight not soon forgotten. I took eight first prizes with them two weeks ago. There was nothing at the show to equal them. As a result there has been a continuous stream of visitors, all of them amazed at the size and perfection of spike and flower and the range of shades embraced."

One Plant of REX OREGONUS

CHASTE WHITE DELPHINIUMS

The New HOODACRES WHITES

One of the loveliest flowers imaginable is a well grown White Delphinium. Its beautiful formation and glistening purity charm when other white flowers do not appeal, and even one spike introduced in a vase of others makes the high-light, so essential to a perfect picture. Upon the vigorous foundation stock of Hoodacres plantings has been born a new race, called HOODACRES WHITES, a revelation to the world and the dream of many come true; the most surprising Delphinium development of the century.

After many years of skillful endeavor by the breeders of the world to produce a good semi-double White Delphinium, it remained for HOODACRES, in America, to bring forth this remarkable accomplishment. And it has been done with the fewest possible intermediate stages of development. The magnificent spikes of purest white are carried as tall and on just as rugged plants as the ones with color. This will be observed in the photographs reproduced in this booklet. There are no duplicates of these WHITES anywhere in the world.

Albinos of the past have been weak and of little worth. Quite as by magic these white creations came, leaving the hybridizers puzzling as to how it was brought about. But the Unseen is a world of actuality and there all things first exist. All we can do is to co-operate in making the conditions on this plane suitable for the reception of such new things.

Be wary of counterfeit "HOODACRES WHITE" Delphiniums. We can be in no way responsible for the character of seeds not grown and packeted here.

ALL WHITE BUT TWO — ONE THE MARVEL OF NEIGHBORHOOD

"Will begin by telling you what wonderful white Delphiniums I had from Pearl Necklace seed. All double but two, one with a large black bee and another a lovely single on the Wrexham type. One outstanding seedling grew about seven feet high with two feet of bloom, florets perfectly spaced, double, and looked like Ship's Mast, shown in the slides. It was the marvel of the neighborhood and have taken pictures of this seedling. Perhaps it will interest you to know that all the seeds that germinated came white but two and they were a lovely blue. To say I am well pleased is putting it mildly."—Western Springs, Ill.

SHIPS MAST, Hoodacres White, one plant.

WHITE VARIETIES

White Sister: Clear white double flowers of good size and fine form, well set on medium length spikes. Strong plants \$3.00 each.

Pearl Necklace: Large flowers of the purest glistening white and carried on a splendid size spike. This is an outstanding creation with its vigorous growth and luxuriant foliage. Strong plants \$6.00 each.

Angel's Breath: The same double, pure white large flowers as above but with a center of fawn. Beautiful combination. Strong plants \$6.00 each.

Velvabee: Clear white double flowers with centers black. For the charm of vivid contrast and purity this variety excels. Specimens attain a height of seven and eight feet, with spikes of proportionate lengths. \$8.00 each.

The Bride: Imagine a Pearl Necklace Delphinium with a charming blush in place of the pure white blossom and you have a picture of The Bride. \$5.00 each.

Bridal Gown: A Hoodacres white with single blossoms. Handsome flowers and excellent plants. \$2.50 each.

Pearl Necklace Seedlings: Excellent specimens; large, pure white and double, but with slight variations from the parent that only the very critical would recognize. Although of greater value they are placed in one class to meet the demand for a true Hoodacres White at \$2.50 each. 15% off on 6 or more.

Velvabee Seedlings: Of the same quality as Pearl Necklace Seedlings but possessing the Velvabee characteristics. \$3.00 each.

Angel's Breath Seedlings: Duplicating the whiteness of above varieties but having centers similar to the parent. \$3.00 each.

For Young Seedlings—White—see page 9.

White Seeds, Page 9.

Ashland, Oregon. "From the packet of Hoodacres White seeds I have had many beautiful flowers. Two of them are perfumed and one has the Velvabee black center."

The HOODACRES WHITE varieties represented above are, in order of placement: VIKING, PEARL NECKLACE, ANGEL'S BREATH, VESTA, VELVABEE and a many-petalled specimen. (Florets about three-fourths natural size.)

COLORED VARIETIES — PLANTS

SELECTED HOODACRES HYBRIDS

Cannot be too highly recommended. From many thousands of plants, we select each season, at time of blooming, by a system of careful checking and labeling, a limited number of exceptional merit that are distinguished into light, medium and dark shades. These are grown into strong blooming specimens before they are sent out and are known as **SELECTED HOODACRES HYBRIDS** and **HOODACRES-WREXHAM HYBRIDS**.

Selected Hoodacres Hybrids \$1.00 each, 3 for \$2.75, 12 for \$10.00.

Hoodacres-Wrexham Hybrids. Superior for size, coloring and general excellence. \$2.00 each, 3 for \$5.00, 12 for \$18.00.

Color Selection. When indicating color preference the classified list on page 10 may be consulted.

Frequently we can supply a few propagated plants from some unusual specimens, of which we have too few to list. These will be subject to correspondence; usually at the price of **HOODACRES-WREXHAM Hybrids**. They are numbered or named kinds.

UN-NAMED HOODACRES HYBRIDS

are sold from the general planting, after all doubtful ones have been eliminated when in bloom. Many forms and colors. These give remarkable satisfaction and frequently single specimens are found to be worth the cost of a dozen. The price is low enough to encourage liberal planting. Do you know the pleasure of a Delphinium patch from which to cut freely for indoor decoration? \$3.00 dozen, 2 dozen \$5.00.

Hoodacres White: Prices on page 6.

NOTICE. We now make free delivery on plant shipments to any destination in the United States. Our system of packing carries them in good order.

New York City: "The 'Young Seedlings' Delphiniums arrived in good condition Saturday, June 1st. They are a fine lot of plants." (They were shipped May 27th by Parcel Post—25 Colored, 12 White.)

YOUNG SEEDLINGS

Topmost quality. Spring shipment only. Good condition arrival guaranteed. The demand each spring for small unbloomed plants is now met. They are from August sowings, carried through winter in outdoor frames, insuring splendid vigor for late summer blooming. Prepared to ship safely anywhere on the North American continent. From following seed stock, specimen plants:

Complete Range of Shades and Forms.

Light Shades only, finest varieties.

Dark Shades only, finest varieties.

Wrexham Strain separate.

12 for \$1.50, 24 for \$2.50. Less than 12 and 4 or more 25c each. We pay parcel post charges.

YOUNG SEEDLINGS — WHITE

Seeds taken from choicest White plants. \$3.00 per dozen, 2 dozen \$5.00, 3 plants \$1.00. Percentage of white plants not guaranteed but produce 80 per cent here.

SEEDS OF HOODACRES WHITE

Originator's True Stock

Double White Varieties: Carefully selected mixture from choicest plants. Pkt. \$2.50.

Pearl Necklace: The Queen of all White kinds. Pkt. \$3.00.

Angel's Breath: The fawn-centered White. Pkt. \$3.00.

Velvabee: The flower of contrast, Black and White. Pkt. \$3.50.

White Sister: A smaller form of Pearl Necklace. Pkt. \$2.00.

The Bride: Like Pearl Necklace but blushing like a happy bride. Pkt. \$2.50.

Delphinium seeds started before end of August will carry over winter in a simple cold frame and bloom the following summer. Except in California and the Southern States, outdoor germination will be questionable after August. We send full planting instructions with each seed order.

Any seed order from this catalog amounting to \$6.50 for \$5.00. Amounts in excess of \$6.50 at 25% discount. (This does not apply to plants.)

SEEDS OF HOODACRES DELPHINIUMS

One of the most exacting operations at Hoodacres is the protection and collection of seeds from prepared specimen plants. Only such are used—we do not gather from the general planting. All seeds we send out are from the latest harvest season and therefore as fresh as possible.

All Hoodacres seeds are from double flowers, unless otherwise stated, and their seedlings are notably free from the rogues, culls, which too often develop from over-praised stock. Our seeds bring pleasing surprises at every turn.

Complete Range of Shades and Forms. A carefully apportioned collection from finest individual plants. Not the ordinary "mixture" of left-overs. Into this class we are putting each year seeds of the newest things, some of which we have insufficient stock to offer separately. We are confident that nowhere in the world is there offered a mixed packet of Delphinium seeds so filled with new colors and highest quality. Liberal packet \$1.00

Bounty Blend: A generous packet carefully chosen from field specimens, representing all colors. Not the "mixty-maxty" sorts commonly put up. (This supplants our ALLTYPES packet as an improvement.) Pkt. 50c.

CLASSIFIED — DOUBLE VARIETIES

Navajo: Lightest mauve and lilac tones. White centers.

Ottawa: Coloring same as Navajo, but centers dark.

Pawnee: Medium shades, mauve and lavender. White centers.

Quapaw: Similar to Pawnee, centers dark.

Rama: Deepest coloring, rich red and blue purples. White centers.

Shasta: Large flowers with Rama shades, but centers dark or black.

Seeds, separate only, \$1.00 pkt. The six for \$5.00.

(Can usually supply Plants from these at \$1.00 each, 6 for \$5.00.)

Wrexham Strain alone. From typical plants only. True Wrexham shape is broad and tapering. Pkt. \$1.00.

Conspicua: Extraordinary centers, surprising contrasts. Some of these are deep blue or purple carrying extra large white centers; others are medium shades with immense jet black and all are beautiful. Seeds only, \$2.00 pkt.

Flying Arrow: A type carrying all the Hoodacres sturdiness, with color shades from very light to very dark, but bred for long spikes—to three feet and over. Pkt. \$2.00.

Gentianet: Among the double-flowered Delphiniums self blues are not frequently found and the above represents the finest deep shade in this segregated class. It is the color of the gentian flower on sturdy well-developed plants. Pkt. \$2.00.

Manzanita: Deepest red-purple, semi-double with black center and large. Plants strong and symmetrical. One of the most impressive in our fields. Pkt. \$1.50.

Mauve Mantle: Singularly attractive in the throng of beautifully colored spikes. True mauve and practically a self. Seeds from specimen plants. Pkt. \$2.00.

Mistland Blue: In double-flowered Delphiniums self blues are rare. This is a charming medium tone, between azure and intense blue and sometimes called "powder blue." Pkt. \$2.00.

Opalspire: As the name indicates, the tones run close to opal effects. They suggest also mother-of-pearl, delicate pink and pastel shadings. A beautiful development through the Hoodacres Whites. Pkt. \$2.00.

Red Rama: A color that stands out strongest among Delphiniums. The petalage is intense violet-red and a large center of pure white. Pkt. \$2.00.

Sunrise Pink: While there is no true rose-pink in perennial Delphiniums, this variety is as near as exists at the present time. It is really a delicate pink-mauve. Pkt. \$1.50.

The Wondrous: From an assembly of specimen Delphiniums, extraordinary for size of florets, we have selected a group of the best for seed parents, the standard of size being at least two and one-half inches and running light to very dark. They are offered this season for the first time. Pkt. \$2.00.

Any seed order from this catalog amounting to \$6.50 for \$5.00. Amounts in excess of \$6.50 at 25% discount. (This does not apply to plants.)

August-sown Frames at Hoodacres. More than forty varieties of Delphinium seeds. Note the remarkable uniformity in germination. Our seeds are bred to grow that way. The one row in second frame which failed was a hand-pollinated cross with a rare foreign species.

How to Grow Delphiniums from Seeds

The seed-bed, whether flat, cold-frame or open ground, cannot be too carefully prepared. Avoid any risky element in the soil. We must both encourage the seeds to germinate and have congenial conditions ready for the sensitive infant plants. When pots or flats are used put ample drainage material at the bottom, shards or gravel, and over this some sphagnum or peat moss. A good seed soil is two parts virgin soil or its equivalent; one-half to one part leaf-mold from deciduous trees, one part sharp sand (more in heavy soil), with a sprinkling of fine charcoal and bone meal. Level and press smooth before planting the seeds and if soil is dry water two hours ahead of sowing. Sow the seeds in shallow drills, never more than one-fourth inch deep, and fill them with fine, clean sand and soil—half and half. Never let the seed-bed dry out for even a moment, nor should it be kept soggy.

For August sowing, cold-frames without glass may be used (where they can remain over winter) shading well until germination takes place. They will flower the following summer. Very early spring sowing in gentle heat (greenhouse or hot-bed) will also produce bloom the same season. Once transplanted before going into permanent place induces fuller root system.

A half-inch layer of sand on top of seed-bed will afford winter protection, and discourage slugs.

Hoodacres seeds are harvested throughout the month of July and are usually ready to send out the first week in August, just in time to be sown for carrying over winter.

It is unsafe to sow out-of-doors after August (except in California and similar climates), as frost will lift the too small plants.

Delphinium seeds are only at their best when fresh and should not be counted upon when more than one year old. The fresher they are the more prompt will be germination. We never send out old harvesting.

Unless otherwise demanded, all seed orders received after June 1st will be filled from the new crop, ready about August 1st. August planting will bloom the following summer.

Watch for **fragrance** in Hoodacres seedlings. There are frequent outcroppings here.

How Hoodacres Delphiniums grow for Dr. Simkhovitch at Robbinston, Maine; even better than where they were born.

HOODACRES YOUNG SEEDLINGS ACROSS THE CONTINENT

Inman, So. Carolina: "My plants (Young Seedlings) came in splendid condition." (Oregon to South Carolina.)

Lakeport, New Hampshire: "My box of Delphinium plants arrived safely yesterday afternoon, apparently as fresh as when shipped." (Young Seedlings.)

SURVIVAL OF THE FITTEST

Hoodacres Delphiniums and Climate

The Oregon climate seems to have been made for plant breeding. Not only is it favorable for the development of new forms and colors, but it also imparts to them a ruggedness that stands the strain of much more rigorous sections, as in the following representative case:

A man who undoubtedly is the largest amateur Delphinium grower in the world contends with one of the harshest climates—northeastern Maine. Dr. Sinkhovitch of Columbia University has obtained Delphiniums from all the prominent strains of both Europe and America. The winter of 1934-5 was unusually severe, plants buried in ice for a long period, killing off entire perennial gardens; his own plantings also greatly suffered.

Reporting the "tragedies" and referring to his extensive collection he states: "Many of them are planted in the same fields under the same conditions, and which do you think suffered relatively the least? They are the Hoodacres of Charles F. Barber. I came here early, the first of May, and could tell off-hand, without looking at labels, which were Hoodacres."

AUSTRALIAN PLANT AUTHORITY REPORTS

"I was very pleased to receive yours of September 3d with Delphinium seeds enclosed; which you will be interested to know have germinated well. I must congratulate you on your care in packing your seeds. It is probably partly due to this method of packing that the germination is 100% after the long sea voyage.

Re Aquilegias: I gave a lecture on these flowers at the last meeting of the Horticultural Society and you may like to know that I took a large bunch of Hoodacres Strain, which proved a revelation to the Society for the beautiful new colors."—Public Gardens Kyneton, Victoria, Australia, (11-7-35.)

HOODACRES SHIPS SAFELY — COAST TO COAST

Calais, Maine: "Received the Seedlings, and they are fine. Let me congratulate you on the condition of them, coming as they did from one coast to the other."

From Emily Post, Edgartown, Mass.: "The plants were too wonderful—I have never seen such splendid clumps. I am sure they will 'behave' beautifully and be a credit to us both."

VELVABEE Vaulting an Eight-Foot Fence.

Delphinium Culture

Plants are safely moved throughout the fall and early spring. Except in very wet, cold soils, autumn planting is strongly recommended. They are not checked when spring growth starts.

After getting well-grown plants, allow a two-foot space for each and open the earth to same depth, and 18 inches in breadth, filling the lowest foot with a mixture of very old manure and garden soil, well mixed and tamped, with a sprinkling of lime added.

Where the sub-soil is very heavy, dig the hole six inches deeper and fill that depth with coarse gravel to insure perfect drainage. If the soil is of a clayey nature, incorporate sand and peat moss with a little ground limestone. Then for the upper half add some leaf mold and a small amount of raw bone meal. The Delphinium prefers soil which leans to the limy side. Set crowns two inches below the surface, the roots well spread and soil firmed against them before leveling. Avoid dense shade, roots of trees, and stuffy locations.

When growth first starts in spring, dig around each plant a trowel of bone meal, mixed with an equal amount of hardwood ash. Cut faded spikes to prevent seeding. It is the nature of hybrid Delphiniums to bloom a second time in the season and as the second growth appears the old stalk yellows, is no longer required, and should be cut down. After a short resting period, give another supply of bone meal and ash, being careful not to destroy the fine surface-feeding roots, and water as needed. If the weaker growths are removed when plants are a few inches high, the remaining ones will benefit. Well-grown Delphiniums will bloom the first season after planting and, being true perennials, should, with favorable conditions, increase in size and grandeur each year.

In much heated sections, as the Southern States and Southern California, the best time for watering Delphiniums seems to be in very early morning, as evening sometimes proves unsafe.

As figs do not grow on thistles, no matter how we tend them, no more can you expect show spikes on your Delphiniums if stock is procured from unskilled growers.

The IDEAL WREXHAM Form as Developed at Hoodacres.

Delphinium Pests

The clean garden discourages many enemies, especially the bacterial ones. Decaying litter provides them a good home.

Avoid fresh manure near plants as you would the pestilence. And use any high-powered fertilizer with extreme caution. It is safer to stick to the plain old-fashioned foods that we all know how to deal with. We are trying "Cupro-Jabonite" against root rot.

Before the Delphiniums start growth in spring a lime-sulphur soaking of the soil, at the orchard strength of ten to one, is an excellent precautionary measure.

In some sections there are spasmodic attacks of the so-called "Blight" or "Blacks"; technically it is known as "cyclamen-mite." It produces distortion and blackening of the growing plant. As the roots may not be affected, the plant should be cut to the ground and burned. A weekly spray of "Rototox" should keep it in check. Our Oregon stock is free from this pest.

If there is a tendency to mildew or black-spot, adding Black-leaf 40 to the lime-sulphur at the rate of one tablespoon to three gallons of water, is recommended. Fortunately, Hood-acres is quite free from these disturbances.

Slugs will sometimes leave home merely by the use of sharp sand strewn over the ground, but more persistent breeds may need copper sulphate crystals crushed fine and scattered where they raid. This is very poisonous and must be handled accordingly.

Sanborn, N. Y.: "I am sending you a picture of my plot of White Delphiniums. There were about twenty whites, but the rest were gorgeous, too; **not a poor specimen among them.** A gentleman from Buffalo heard about them and came out to see. He said: 'You don't mean to tell me you got all of these from one packet of seeds?' I received first prize at Lockport Fair again this year."

SUGGESTING THE COLOR RANGE IN HOODACRES DELPHINIUMS

In order of position: Mistland Blue, Conspicua Single, Opalspire, Conspicua, Sarah Barber, Decoration.

(These colors are only approximately Nature's effects as they must be mechanically reproduced.)

Sunrise Pink, Gentianet, Manzanita, Chief Grandin, Mauve Mantle, Rama Florets are about three-fourths actual size.

THE BRIDE, Beautifully Blushing.

BOOKS ON THE DELPHINIUM

Helpful to the Grower or Would-be Grower

DELPHINIUMS: THEIR HISTORY AND CULTIVATION. By George A. Phillips, an English authority on this subject. Finely gotten up; entertaining and instructive along Delphinium lines. Illustrated, 250 pages, \$2.50 prepaid.

BOOK OF THE AMERICAN DELPHINIUM SOCIETY. A treatise by various authors specially fitted to deal with their particular phase of the subject; breeding, culture, judging, etc. Also illustrated, 150 pages, \$1.75 prepaid.

DELPHINIUM SOCIETIES

American Delphinium Society. Secretary, Raymond C. Allen, Department of Floriculture, Cornell University, Ithaca, N. Y. Annual subscription \$2.00.

British Delphinium Society. Secretary, A. J. Moir, No. 3 Warwick Road, Surrey, England. Annual subscription 7/6.

DELPHINIUM LANTERN SLIDES

Beautifully Colored

For loan to Garden Clubs when DELPHINIUMS are to be featured.

The set numbers 60 artistic and exceptionally well executed subjects, mostly Delphiniums, with carefully prepared notes and a Delphinium talk. They are available to any accredited Garden Club, without charge, except payment of transportation one way.

In order to make sure of suitable dates application should be made as far in advance as possible.

HOODACRES DELPHINIUM SLIDES

Kansas City, Mo.: "Permit me to express, not the measure, but the fact of the extreme pleasure given to the group of 200 women, members of the Kansas City Gardens Association, who were privileged to view the glory displayed in your group of Hoodacres Delphinium slides."

ENJOYING THE HOODACRES COLORED SLIDES

Cleveland Heights, Ohio: "We have just had the privilege of your exquisite Delphinium slides and they were thoroughly enjoyed by each and everyone in the Lake Shore Garden Club." (3-18-35)

CONSPICUA, Ornamental Centers.

DOUBLE BLOOMING

The hybrid perennial Delphinium is urgent to repeat its early summer performance and bloom again later. This generosity on their part suggests that we give them a good feeding when the first display passes and not neglect watering.

All Delphinium plants, except Small Seedlings, are one to two years old. **No charge for packing or transportation.**

Fall shipments begin about the middle of September and continue into November.

The Hoodacres method of preparing and packing plants for shipment fits them to stand long journeys in good condition.

The Test of Seed Trueness: In a solid planting of seedlings, 60 x 60 feet square, from seeds gathered in our regular white section and bloomed out in 1935 for the first time, 83% of all the plants were White. Such a record for a new Delphinium variety has probably never before been made.

Seeds, from Seeds, from seeds that one time in the past came from some fine variety may now utterly lack the original's virtues and be like "The harp that once through Tara's halls * * *" The originator's true seeds may cost a little more but the effort is not wasted. Better get the genuine.

Turning Delphinium seeds over to the regular florist to germinate is often risky. We give growers the benefit of over thirty years specializing with them, but the professional resents being told. As aristocrats the Delphinium race insists upon having its own way, too.

LEANING OVER THE GATES IN NEW ZEALAND

Auckland, N. Z.: "In all my life I have never seen such huge plants, huge flower spikes and huge blooms! The plants were from five to seven feet in height and some of the flower spikes were over three feet in length—the blossoms ranging from 2½ to 3 inches across. Of course we had numbers of people leaning over the gates and several nurserymen came to see them."

LEADING GROWERS OF THE WORLD

Robinston, Maine, September 1933: "I have great regard for your achievements, in fact am convinced that you are the best man in the Delphinium field in America. Since I have plants of all the leading growers in the world, including all the distinguished English growers; my admiration for your work is based on experience."

The DOZANNA Type Developing at Hoodacres.

HOODACRES HYBRID HEUCHERA

For the Garden Trim

A new race of "Coral Bells" or "Fairy Flowers." Greater size, vigor and blooming quality. Handsome evergreen foliage, many wiry stems clothed with bells of rich and vivid red shades, also soft pinks and white. Height 12 to 18 inches. Much more vigorous and prolific of bloom than the older kinds offered by the general nursery. An ideal edging plant for all the year and brilliant with color over a long period. An ornament in the rock garden and a lasting cut-flower. When this plant is grown in colonies it becomes a revelation of beauty. One of our specialties.

Albatross: Beautiful clear white variety.

Angelus Bells: Charming medium tone of coral.

Cathedral Bells: Vigorous glowing pink.

Edge Hall: Medium dwarf light pink.

Farafene: Excellent white.

Gorgeous: Medium coral; English variety.

Hermes: Spray-like flowers, tall, flesh pink.

Matin Bells: Bright pink, medium tall.

Rain of Fire: The well-known "Coral Bells" color.

Above varieties 30c each, three for 85c, 12 for \$3.00.

Coralie: Bright rose red, seedling Q. of H.

Queen of Hearts: Deepest glowing coral coral-scarlet. Long blooming.

These special varieties 50c each, 12 for \$5.50.

Heuchera Seedlings: Varying shades, mostly corals. \$1.75 per dozen, 6 for \$1.00, 100 for \$12.50.

EASILY GROWN — HEUCHERAS AND DELPHINIUMS

Newark, N. J.: "The Heucheras and Delphiniums you sent me have been wonderful, and so easily grown. They have had no special care. Seeds were planted in the open ground and grew robust plants." (1-16-34)

ORIENTAL POPPIES

For splendor they occupy a place of their own. We have eliminated from our plantings all the old small-flowered and common orange kinds.

Plant in neutral soil of good quality, deeply dug, where they are to remain. Their roots are long and brittle.

Australia: Immense size, rich, deep carmine bowls standing three feet in height. This remarkable Hoodacres variety is one of the two Oriental Poppies which received the highest rating in 1933 by the judges who passed upon the entire field of available kinds. \$1.25 each, 3 for \$3.00.

Ethel Swete: Fine English variety, cherry-pink; a new color in Orientals. \$1.50.

Gray's Orange: An upstanding large orange-scarlet, very little black at throat; attractive. Australian production. \$1.25.

Lady Moore: Glowing salmon-pink. Keeps its color and blooms along with Delphiniums; remarkable color combination, 24 in. \$1.00, 3 for \$2.25.

Lord Lambourne: Deeply fringed petals, heavily blotched black at throat. 50c.

Mandarin: Remarkable Chinese red, very tall and strong grower; rare. \$1.00.

Mrs. Stobart: A new and rare English introduction, soft old rose; very unusual. \$1.50.

Trilby: Another outstanding Oriental. Large shapely blossoms of lustrous red, petals crinkled. An important feature is its late-blooming quality which happily extends the season. \$1.50 each.

A WONDERFUL EXPERIENCE — SEED GERMINATION

"I am writing to let you know how well your seeds germinated for me. The first of last August I planted a packet of your Complete Range seeds, in a carefully trenched and prepared cold-frame. I counted 176 plants in October when I mulched between the rows with sand. The first of December they were covered with corn-stalks. This has been a very aggravating winter—first zero weather, then everything thawed entirely out, then froze up again. But now the little green crowns are sticking up above the sand. Wasn't that a wonderful experience? Almost as much fun as seeing a tiny baby safely through its first six months."—Burley, Idaho.

HEMEROCALLIS — The DAYLILY

Most effective border plants in their greatly improved forms, that bloom after the plethora of flowers is past. Tones of yellow and gold and heights from eight inches to four feet. New shades and largest blossoms. Deeply dug soil, well enriched, will show in size and abundance of blossoms.

We have screened out many of the new varieties which have had fictional praise and list here such as our own tests have demonstrated worthy to recommend.

Calypso: Large lemon-yellow; the finest of its shade. A Burbank origination. \$1.00.

Cinnabar: Much overpraised. Color is mixy, orange-fulvous, and not a good bloomer here. 50c each, to close out stock.

Dover: A splendid deep orange, medium height, good-sized flowers. 75c, 3 for \$2.00.

Flava: The "Lemon Lily" of other days. Still a good doer, even if the blossoms are not equal to size of newer kinds. Blooms nearly a month in advance of other kinds. 25c.

J. A. Crawford: So outstanding in color, form and performance that we rate it indispensable. Very large rich apricot yellow, fine height and most vigorous. \$1.00 each, 3 for \$2.50.

Mikado: Among Dr. Stout's originations this is the best doer here. Flowers large orange, with a fulvous ring midway of the petals. Medium height. Our stock is sufficient to offer this at a low price. \$1.50 each.

Margaret Perry: Originated by Amos Perry, England, and conspicuous for its attractive two-color petals and profuse blooming habit. This is what Cinnebar ought to be. \$2.00 each.

PLEASURE, SURPRISES AND WHITE DELPHINIUMS

"Last summer I received from you a package of Delphinium seeds. I planted out the seedlings about the middle of May and ever since it has been a season of surprise and pleasure, hard to describe or put into words. They have nearly all bloomed, showing such a variety of markings, shades and coloring. Five of them have been white. One white has been called by a friend 'Angel's Breath'—a beautiful double, very full."—Amesbury, Mass.

ANGEL'S BREATH with dusky companions. Short laterals.

TOWER BELLS

Campanulas of the new "Giant" peachbells class, standing four to five feet high with tough stems, clothed their length with great bells of Bradley's Violet. Splendid Delphinium companions, hardy and long blooming. 40c each, 3 for \$1.00, dozen \$3.50.

HOODACRES AUBRIETIAS

Semi-trailing alpine perennials. The catalogs list wall, rock-garden and edging plants by the thousands and merit must attach to each one for somebody, somewhere, sometime; but when the casual visitor comes into your garden in spring it will be to ignore most of the demure things, but a good planting of Aubrietias will be a feast for all, and one can afford to forget their congeners for the time. They just will not be outdone in liberality of bloom and insist upon getting started bright and early to carry on for a couple of months and scatteringly still longer. Their hillocks of solid color, violet, purple, blue, crimson and pink tones are glorious. The pale shades from imported seeds are not effective. Our development of these plants over a long period has brought exceptional size and coloring. Plants 30c each or \$3.00 for 12, 3 for 80c.

New Viola — PURPLE GLORY

Jersey Jewell was a great improvement over the fine Jersey Gem, in size, color and profusion of bloom, but unfortunately was unable to survive some winters. Purple Glory has that resistance and all the other good points. We have given it a thorough trial. Plants build up into large clumps, sheeted over with bloom. 25c each, three for 60c, 12 for \$2.00.

NEW FASHION HINT

The bridesmaids will be gowned alike in rose beige lace with arm bouquets of Dawn roses and Delphinium and the bride's little cousin.—
(From Literary Digest.)

LITHOSPERMUM (Gromwell)

Heavenly Blue

The rock garden is really incomplete without this incomparable blue plant. It is evergreen and trails as a small prostrate shrub. Its mats are covered in May and June with blossoms the size and shape of large Aubrietia flowers, but "heavenly blue" in color. 50c each, 12 for \$5.00.

Seeds of AQUILEGIAS (Columbines)

The plants with beautiful foliage and always charming flowers, for sun or shade. The Hoodacres strain is notable for its large flowers and long spurs, but especially its new deep colors. Packets contain the deeper colors along with medium and light shades, well proportioned, as Eastern Prince, Copper Queen, Silver Queen, Myrose, Golden Shore, Red Spur, etc. Pkt. 50c. Some of these varieties can be supplied separately.

HOODACRES LONG-SPURRED AQUILEGIAS

Elizabethtown, Pa. "The Columbines I grew from your seeds are the finest I have ever seen, hence the order for additional ones."

FROM PUBLIC GARDENS, KYNETON (Near Melbourne), AUSTRALIA

"I am pleased with your strain of Aquilegias, now in full bloom. Unique colors among them. Mr. D—— sent me seeds of several English strains at about the same time, so I am comparing them. So far yours are much the best. Your Heucheras are also blooming and are fine."

STILL TALLEST AND HEALTHIEST

Norwich, Ontario: "I bought Delphinium Seeds from you several years ago and they are still the tallest and healthiest of my group."

NEVER SEEN BLOOMS TO EQUAL

Palmer, Mass.: "I have just returned from a visit to the garden of Mrs. Payne, of Montague, where I saw some wonderful specimens of Delphiniums, raised from your seed. I have never seen blooms to equal them." (7-14-35)

THE PICTURESQUE JAPANESE IRIS FOR AMERICAN GARDENS

Their form, their markings and their color effects are distinctly Oriental, and strike a new and captivating note of garden pleasure. The foliage is upright and ornate, in contrast to the coarse leafage of some other plants.

It is difficult to express by words the many variations in tone that result from nature's use of violet shades and white, embellished with gold, which are the prevailing base colors of the class. Yet they run from the most intense red and blue violets or purple down through their most delicate shadings to pure white. Many of our newest hybrids are particularly charming in tender orchid tones.

Their culture is easy, but exacting as to their simple wants. The soil must be deeply dug and on the acid side which excludes lime and bone meal. Leaf mold and manure may be used quite freely for richness, and to create greater acidity apply in spring a light dressing of Aluminum Sulphate. Then be sure that before and during the blooming season there is no lack of moisture in the soil and if your plants are well chosen you will marvel at their size and opulence. But do not expect them to be at their best the first season after planting.

This list of Japanese Iris is truly one of outstanding origination and not of out-dated mediocrities. Many named varieties have been discarded as too far below our standard and thousands rogued for the same reason. Too many growers are loth to eliminate stocks which have been superseded in quality. If out of a thousand hand-crossed seedlings we get two or three of rare merit we are pleased, but such plants cannot be sold at the price of the ninety-and-nine.

A PROFESSIONAL GARDENER

West Millbury, Mass.: "Please send your latest catalog. I wish to purchase Delphinium seed as I have done for the past few years. Your stock is the best of all in America, without dispute."

A Hoodacres Jap: FUJISAN

OREGON TO NEW ZEALAND

Auckland, New Zealand: "The Japanese Irises arrived in perfect condition and after being in the ground one week are already getting a nice green. The bed they are in was prepared months ago."

Azure (68): Great wavy petals of mauve-blue deepening towards the golden arrow at base. Double. 50c.

Blemona (S111½): Medium blue, tall and effective. Single. 75c.

Blue Danube (82): Large double, indigo-blue with violet. Rays of white from base. Showy. 50c.

Charlotte (27): Bright violaceous-blue with gray-white mottling, yellow bar. Beautiful single. 50c.

Clarice Childs (10): Beautiful large single. Petunia-violet, bluer toward gold of base. 75c.

Cloisonne (31): Tyrian blue and purple, white feathering towards base with orange arrow. Double. 50c.

Close of Day (179): Six beautiful deep blue petals. 50c.

Dancing Girl (S84): Mulberry purple, large crest. Double. \$1.

Day Dream (42): Soft pinkish lilac, lightly veined pale violet-blue, golden base. Single. 75c.

Emmeline Blue (Sm42): Large, single, bright violet-blue. Very effective and pleasing. 50c.

Estacada (70): Red banded, white center. Single. New coloring. \$1.00.

Ecstasy (121): Same coloring as Estacada, smaller. 75c.

Fujisan (51): A perfect flower. Plants most vigorous and abundant bloomer. Shades of fine light blue-lavender. Large double and fairly tall. \$1.25.

Glorywine (107): Winy veins on gray white, winy halo to gold shaft. Unusual coloring. Double. \$1.00.

Kalhiko (13): Large splendidly finished flower. Close blending of violet and white, producing a Chinese-blue effect. Gold arrows at petal base. Late double. One of the finest Japs grown. \$1.25.

GIANT JAPS THE ENVY OF ALL

Amesbury, Mass.: "The Japanese Iris, Kalhiko and Lucie Marshall, bought of you two years ago, have been the envy of all admirers." (8-6-34)

Among the outstanding Japanese Iris recently orginated here, this one from the garden of my neighbor, Mrs. U. G. Smith, is singularly beautiful. Its name, PERFECT PEACE, is well chosen. It is pure white — the dark bars represent gold in throat.

Kasugano (142): Fine double, deep pink with deeper pencilings, gold bar, fine size. 75c.

Lena Rivers (49): Very large single, broad white petals, surmounted by lightly veined standards. 30 inches. 50c.

Lucie Marshall (69): A spectacular large double. Pansy-violet intensified with broad gold spear, surrounded white and white pistils. Universally admired. 50c.

Mahogany (109): Double large mahogany red. Very showy. 50c.

Mrs. Fred Honey (Sm90): Large double flower of velvety mulberry purple, prominent gold bars. Beautiful new variety. \$1.50.

Mrs. John Hawker (Sm45): Unique in its distinct and rare coloring of coerulean blue. Flowers double. Highly valuable to the connoisseur. \$1.50.

Mu-ra-Saki (S83): Very large, blue haze, mottled white. Six petals. Double. Outstanding. \$1.00.

Nahcotta (172): Russet-red, unusual color. Single. 50c.

Nequanie (40): Deep blue and gold. Double. 50c.

Octoroon (86): Peacock decoration of gold, white and blue, shading into petal color of orchid-lavender. Exquisite single flower. 75c.

Oregonian (S106): Plum purple, white flecks, few single. 75c.

Outrider (43): Medium violet single, flecked just enough with white to modify the tone. Single. 50c.

Panoply (2): One of the newest and tallest single. White flecks on blue, blue pistils, standards bright claret, gold feathering at base. Impressive for size and tone of Chinese blue. \$1.00.

Perfect Peace (S18): A marvelous new flower. Purest white throughout, very large, with tall frilled crest in place of the usual standards. Its waxen purity is most captivating. \$1.50.

Pink Mantle (Sm85): Three very large pink petals with a silver sheen. Deeper standards and pale lavender pistils add to its beauty. \$1.00.

Pulcher (63): A combination of white and soft pink, fine coloring, double and good size. Ideal for semi-shade. 75c.

The Japanese KALHIKO.

THE POET DIDN'T KNOW

She sang:

"Here are humming-birds that come
To seek the tall Delphinium;
Songless bird and scentless flower
Communing in a golden hour."

—(Louise Driscoll)

But Hoodacres has tapped the secret spring and lo, the perfume is trickling down into our Delphiniums to a surprising extent. It lodges in both white and colored kinds.

Redhof (119): Reddish tone of purple. Double. 50c.

Royal Purple (15): Large double royal purple. 50c.

Ruritana (5): Enormous blossoms blue-purple. Double. One of the most impressive. \$1.00.

Savant (35): Deep blue-purple single, shapely and good size. Exceptional value at 50c.

Smith's Glory (Sm93): Strikingly large and imposing. Purple with winy veins, giving a russet cast. Bright gold bars. Double and one of the newest. \$1.50.

Supremacy (83): Intense violet-blue single, large and symmetrical, with bold golden spears. 75c.

Tateyama (50): One of the finest shades in Japanese Iris. Large broad petals, light lavender-blue, taking on a near pinky tone. Vigorous single. 50c.

Todamo (48): Large double flowers, rich purple and gold. 50c.

Waves in Moonlight (138): Creamy white, wavy. Double. 75c.

White Dress (84): Tall double white, prolific bloomer over long season. Golden spades at base. 75c.

Discount: One-fourth off on 5 or more.

The Hoodacres Collection consists of one each of the above, marked and delivered to any part of the United States for \$20.

Bounty Collection: In addition to above we are growing many varieties ranging from 50c to \$1.00 each, of which we have insufficient stock to list. These together with surplus of our regular kinds we are including in this collection, well balanced for color. \$2.50 for 10, while they last. Delivered.

BUT NONE LIKE THESE

Arnolds Park, Iowa: "Send me immediately two packets of Complete Range Delphinium seed. I got a packet of this seed two years ago and to say I was delighted is putting it too mildly; I was really astounded. There were white and all shades. I have had seeds from all the best growers but none like these."

PERFECTING WITH HOODACRES DELPHINIUMS

"I am a lover of the Delphinium and have been perfecting my planting each year. I am delighted with what I got from you last year and among them I have several beautiful white ones. I think I had 100% germination, but lost some with slugs."—Oakland, California.

The Orient in America.
